

LIGHT & COOK

reflexió gastronòmica - percepció audiovisual

We are Light & Cook, a multidisciplinary multimedia and gastronomy team consisting of Josep Font and Aleix Gorgorió (winners of the open category in the first edition of the International Mapping Competition in Girona held in 2014), and members of Lighthink Lab. Guillem Fàbrega, audiovisual communicator and director of photography at Rem Studio, and Àngel Garcia, chef of the Bubbles Gastrobar restaurant and member from Girona's Gastronomy Association.

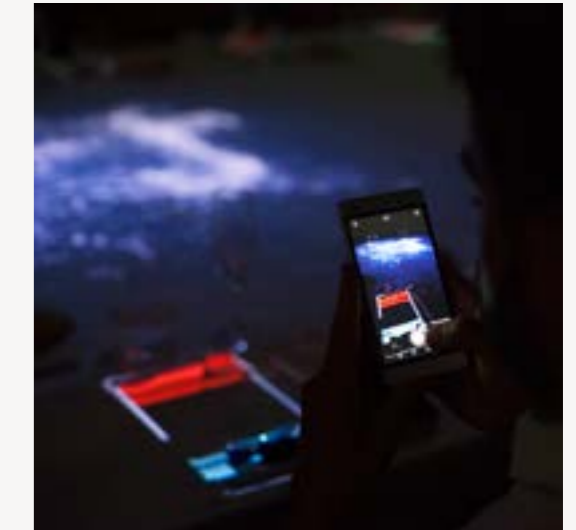

We are specialized in haute cuisine and (or with) mapping show, playing and mixing the cultural and technical borders from the gastronomy and the digital and multimedia art. Our last project, "10 contradictions" was a piece of this.

The '10 contradictions' project is a blend of mapping and gastronomy showcasing a dialogue between multimedia art and contemporary gourmet cooking. '10 contradictions' is a 10-dish menu served with the accompaniment of 10 video-projections – on the table and the walls. '10 contradictions' was one of the events of Girona's II International Mapping with a good reception from the specialized critics and also former and specialized costumers.

Technical aspects

Light & Cook infrastructure consists of a workspace where technical controls and manages live by software the audiovisual work. This wired workspace is connected directly to the projectors and sound system. The art director is the figure who links the space with the maître in order to obtain a global result in every dish.

In the “10 Contradictions” project we built the workspace in the dining room, which was separated with dark curtains to divide the space and obtain a neutral and private area. We used two wide range projectors in a 20 commensal table plus three ambiance projectors and one live streaming camera.

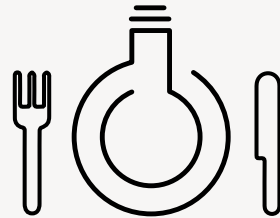

“Our sensory experience of the world originates in the inner feeling of the mouth, and the world tends to return to its oral origins. The most archaic origin of architectural space is in the buccal cavity.”
